

On the 10th day of Christmas Hedrick gave to me...

Flow-Tech Water Treatment System:

A solution offering complete control of scale, biological and corrosion in hydronic systems, without the hazardous chemicals.

☀ Revolutionary technology developed and successfully deployed by petrochemical engineers and scientists.

☀ Flow-Tech is the only system on the market that maintains measurably signal strength throughout in an entire plumbing system regardless of flow.

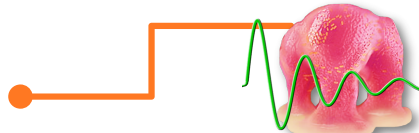

Scale control:

- Flow-Techs signal causes scaling particles to adhere to each other instead of heat transfer surfaces.

Biological:

- Bacteria are encapsulated in the same powder that prevents scale formation.
- Flo-Techs electrical field creates holes in bacteria cell walls preventing them from reproducing

Corrosion:

- Operating in an alkaline environment allows the calcium carbonate to act as a natural cathodic corrosion inhibitor

Advantages to going chemical free:

- Elimination of hazardous chemical transportation and storage
- Ability to reuse blow down water (irrigation and other grey water)
- 10,000+ flow tech systems deployed world wide
- Eliminates ongoing chemical costs
- Eliminate sewer discharge fees
